COVER LETTER - TECH ARTIST, 2D PROJECT (UNITY)

Dear Pine Creek Games team,

I'm applying for the Tech Artist contract on your 2D Unity project. For four years I worked at PRODUKTIA, a small studio, where I started as a Technical Artist intern and became one of its main Unity developers, acting as the bridge between artists and code.

Shaders and VFX. I write shaders in HLSL and Shader Graph. On [Nanoscope](#) I built custom underwater shaders and effects that ran smoothly on a standalone Quest headset.

Optimization. Most of what I shipped ran on limited hardware: Android, iOS, Meta Quest and Pico 4. VR is one of the toughest targets to optimize for, and I got [GRAPAT de BTC](#), a multiplayer VR escape room, to a locked 90 FPS on Pico 4. I haven't shipped on Switch yet, but its constraints are close to the ones I deal with every day.

Animation and pipelines. I've made 2D and 3D animation in Blender and After Effects, and moved CAD and photogrammetry assets into Unity within polygon and texture budgets. Toon Boom would be new to me, but I learn tools quickly and would enjoy building your Toon Boom-to-Unity pipeline.

I live in Aalborg, so I'm in your time zone. You can see my work at [ethannavarro.site](#).

Thank you for your time. I'd love to talk.

Best regards,
Ethan Navarro
